**24 Hour Service**  
**90 YEARS PLUMBING HERITAGE**

## Priority Care Preventative Maintenance

All businesses have one thing in common: unexpected plumbing, sewer or drain problems that can cause havoc and affect revenue. Regular maintenance, however, can virtually eliminate emergencies caused by backed-up drains or damaged pipes. Let Rooter Hero provide you with a customized, no-obligation Priority Care Service Agreement that includes occasional, brief service calls to evaluate the health of your entire plumbing, sewer and drain systems.

# Trenchless Services

## TRENCHLESS PIPE REPAIR

Over time, pipes can corrode, crack, and misalign, allowing access for tree roots and other objects to enter into the lines. This can result in blockages and a reduction in wastewater flow from your place of business to the municipal lines. In some cases, it can also mean sewage overflows, which can devastate a business. Rooter Hero offers “trenchless” methods to replace cracked, broken or leaking pipes without digging, minimizing disruption to your property, employees, customers and the bottom line.

## PIPE LINING

Pipe relining is the process of repairing a damaged sewer pipe by lining it with a new, “pipe-within-a-pipe.” The existing pipe is cleaned and then lined with a pre-cut and measured felt liner. The liner is saturated in resin, inserted into the existing pipe, inflated and then cured to harden, taking the shape of the host pipe. The result is 100% restoration of function and flow in less time and for less money than traditional dig and replace methods.

## PIPE BURSTING

Similar to pipe relining, pipe bursting requires only two small access holes and is especially useful when you want to replace a damaged pipe with one of equal (or even larger) size, or if the existing pipe is out of capacity. This cost-effective method can be used advantageously to reduce damage to pavements, parking lots and building structures, while minimizing disruption overall.

# Plumbing Services

## PLUMBING REPAIR AND RENOVATION

Many people know us for our quality drain cleaning services, but did you know that Rooter Hero is also a trusted full-service plumbing company? We take plumbing very seriously because a plumbing emergency can mean lost productivity and revenue for you. This is especially true if your facility has to close temporarily while a plumbing issue is fixed. Our technicians are professionally trained to service industrial, retail and corporate-grade plumbing and fixtures both efficiently and expeditiously. From a small toilet leak to backed-up sewer lines and emergency flooding, Rooter Hero technicians can handle what plumbing challenges your company may face.

## SEWER AND DRAIN CLEANING

The most common cause of commercial sewer drain blockages is simple buildup, typically from dirt, debris and mineral deposits. If you work in a restaurant or food processing facility you know that grease and other organic matter can build up in pipes and drain lines very quickly. So what are you supposed to do when these blockages happen? Call Rooter Hero. There is no job too big or too small for us, and trust us, we've seen it all! For the removal of scale and residual cast iron build-up Rooter Hero uses the Maxi Miller Picote machine. Used with our other drain cleaning equipment to remove roots, lateral re-instatements, collapsed liner and provide preventative maintenance to your sewer lines, Picote is also capable of cleaning 1-1/2" to 2" vertical lines behind sinks and in bathrooms. This unique machine also has an epoxy coating capability for 1-1/4" to 6" pipes, offering strong bonding properties for cast iron, PVC, concrete, or clay piping.

## VIDEO INSPECTION

Rooter Hero's highly trained technicians provide comprehensive assessments and recommendations. Our high-resolution cameras record grease buildup, leaks, broken pup and obstructions. The video inspection allows us to locate the line identify the compromise and determine the best course of rehabilitation or repair for each unique job.

## HIGH PRESSURE JETTING

Rooter Hero uses state-of-the-art water jetting equipment to safely and effectively clean even the most highly obstructed pipes. A hose is propelled by water in to the sewer line under tremendous pressure. The sewer line is cleaned by powerful forward and reverse jets of water, which washes the scale, silt, sand, grease and other materials back to the manhole for removal. The debris is responsibly removed from the line, minimizing the chance of future blockages.
